

Green Corporate Power Purchase Agreements

Green Power Straight from the Source

If you want to make your company's energy supply more sustainable and improve your carbon footprint, a Green Corporate Power Purchase Agreement (PPA) might be the ideal solution: Benefit from a reliable, clean energy supply and long-term price certainty at steady costs.

ABO WIND

**ABO
WIND**

More and more companies decide to procure green energy straight from the generator. By joining this movement, you underline your corporate sustainability strategy, while decoupling energy costs from market price movements. At the same time, you will actively support the clean energy transition and improve your company's public perception.

Tailored Green Power Purchase Agreements (PPAs)

ABO Wind offers different models for structuring a PPA:

Your company will be supplied by a renewable project currently under development by ABO Wind ('Off-Site').

Your company will be supplied by an existing project which is close to the end of the current marketing scheme ('Off-Site').

Your company's ground is made available for developing a dedicated renewable project carried out by ABO Wind ('On-Site').

How it works

- In a first step, ABO Wind openly discusses your company's sustainability strategy, and assesses your load and generation characteristics, e.g. overall electricity consumption and demand shape, procurement, and risk policy.
- Depending on the outcome of the first step, ABO Wind assesses potential projects from our existing pipeline ('Off-Site') or viable project set-ups ('On-Site') and proposes the best-suited solution to your company's needs.
- Based on your company's decision, ABO Wind will propose a term sheet, including all commercial terms, for execution.

Benefits for your company

- You take responsibility for the sustainability of your energy supply, while improving your company's carbon footprint.
- By procuring from a dedicated renewable energy asset, your company gains certainty about the origin of the electricity.
- By reducing exposure to market price risks of electricity, mid- and long-term business planning is improved.
- Green electricity supply goes hand in hand with a decoupling of carbon or regulatory related risks.
- 'Development as a Service' ('On-Site'): Make use of ABO Wind's longstanding expertise in developing, implementing and operating renewable energy assets.

Why ABO Wind?

As an independent, international developer of renewable energy projects, ABO Wind offers exclusive PPAs for the exact amount of electricity needed. Depending on your energy demand, you can either purchase the entire output of a renewable energy project, or only parts of it. Our experienced financing department structures complex renewable energy PPAs that are tailored to your needs. With 25 years of experience in the sector and 1.6 GW of renewable energy capacity built, ABO Wind is among Europe's leading specialists in clean energy.

You would like to find out more about Green PPAs?
We are looking forward to hearing from you!
